

## 2MM, 1LB VARIANCE & ASTM TESTING REALSTONE HAS IT, OTHERS DON'T. WHY IS IT IMPORTANT?

- Others use low quality, untested, and inconsistent materials which take extra time to instal and end up costing more.
- Others outsource production to small manufacturers that don't secure and produce consistent quantities of quality materials.
- When companies have no standards for quality and safety you get a product that you can't trust.
- When a company spends the time and money to test, refine and control a product, you get top quality and seamless installation.
- Because you get what you pay for and talk is cheap. Ask for tested, quality products with substantiated claims and hands on customer service that you can rely on.
