

FEATURED PROJECT | Charles B. Benenson Visitors Center & Gallery

A true 'green' project, the recently completed Charles B. Benenson Visitors Center & Gallery, utilizes the Realstone Terracotta Shadowstone to achieve sustainability as well as a stunning contemporary look. As a LEED certified building, it showcases state of the art "green" systems like a live planted roof, solar power, daylight sensors and operable windows. As a reclaimed, VOC free product, Realstone fits right in with the progressive building practices used in this project. The juxtaposition of sleek glass and natural texture of the stone, bring a sophisticated yet natural feel to the building.
